HI,

Welcome to a new financial year, we were certainly thrown a few challenges in the last one but from our perspective the market is looking optimistic.

There's always plenty happening around the place with some interesting new projects, like the HMAS Cerberus and the Logan Hyperdome, while our latest venture into greasetrap pumpouts, is moving along nicely. Both our sales and technical teams have been busy educating and informing the market on our latest innovations, and as always if you've got any questions give us a call.

KEEPING OUR OCEANS CLEAN

The HalganPure™ Gross Pollutant Trap was developed as part of our range of sustainable environmental treatment solutions. Through the run-off of rainwater, storm water flows through street drains and pipes to creeks, rivers and the ocean, carrying with it rubbish, grease, oil, sediment, and chemicals.

The solution is capturing these pollutants at the source, that is, in the workshops, industrial sites, road side drains and depots where pollution is rife.

Removing Capturing up to 95% of pollutant particles over 1mm, and 80% of sediment down to 75 microns, the HalganPure™ is a vortex system designed to meet storm water quality objectives for surface water. Using it upstream will help protect our oceans and waterways and will assist in the overall objective to treat and clean up our environment.

For further information on the HalganPure™ GPT call us on 1800 626 753 or email sales@halgan.com.au

RECYCLING POLYETHYLENE

This year at the Rotomould 2019 Conference there was a lot of discussion about the ban of single use plastics, and the fact that rotomoulded products can be recycled, but the general public is not aware of this. There is a real need to educate about the use of polyethylene, and its environmental merits. At Halgan™ we recycle our HDPE, and adhere to environmentally sustainable work practices.

HMAS CERBERUS

NSG Plumbing have been a part of the ongoing project at HMAS Cerberus, the Navy's premier training establishment near Melbourne. There is a huge amounts of work being done at the training base with sports fields, pools and other training sections being built. Recently a HANS™1500, HCPS™1500 and HT™1500 were purchased to install at HMAS Cerberus to service the new project.

SHARING OUR EXPERTISE

The AHSCA Vic Chapter meeting was a great chance for our Operations Manager, Ian Hansen, to present on Innovation in Trade Waste products, and how we gained AS1546 certification. Ian is a valued member of the Halgan™ team with over 35 yrs of expertise in the roto moulding industry, who had a lot to share with the Melbourne Hydraulic Engineers.

UPGRADE @ HYPERDOME

The Logan Hyperdome, south of Brisbane is one of the largest single story shopping centres in Australia, and is currently undergoing a major upgrade and expansion.

B & S Pipelines are installing 2 MGTS™8000 in one of the loading docks as part of the project, and in the coming months there are more to be installed throughout the Hyperdome's upgrade and expansion.

Email sales@halgan.com.au for info

SIMPLE SOLUTIONS

Tim Kelly plumbing recently installed a MGT™4000A at the Calamvale Shopping Centre in south of Brisbane.

The MGT™4000 was used as it could be installed above ground and would fit into a relatively tight area. Installed next to a wall and on a concrete footprint, it was a no fuss solution that proved both time and cost effective.
